

# PDF3D for Geosoft

**G**eosoft Inc. has announced that it will integrate PDF3D technology from Visual Technology Services into its Oasis montaj, Target and Target for ArcGIS software products. Geosoft says that this supports its vision of making geospatial data access and analysis simple and natural.

“We see an opportunity to leverage the technology to support the new interactive 3D viewing functionality in the Adobe reader. This will provide our users with flexibility for sharing and directly interacting with geospatial data” said Louis Racic, Geosoft Product Manager.
